

CASE STUDY

HOW IT SERVICES CAN HELP ASSESS THE CREDIT SCORE OF A POTENTIAL CUSTOMER

Overview

Our client is a leading Property Management, Investor and Developer in the Middle East region. They have a significant presence in the UAE and are known for their quality and commitment.

As part of their operations, the organization was **looking to implement Al Etihad Credit Bureau (AECB) credit services**. Organizations use credit reports to assess the financial standing of their potential customers, be it an individual or a company. This is especially useful for Real-Estate Companies when dealing with potential customers.

They were looking for an adept team to take care of the technical requirements and provide a smooth implementation process.

They approached Varishtha Infotech to assist them in this implementation.

Observations

After analysis, Varishtha Consultants observed that there were certain requirements to be fulfilled to implement AECB services:

- A static IP from the ISP
- SSL certificate from ISP for each system

Implementation

After thorough analysis, Varishtha Consultants formulated an implementation strategy:

- Analyse existing IT systems of the organization
- Understand requirements from AECB
- Develop a Plan of Operation in conjunction with clients team
- Implement technical requirements/changes
- Conduct thorough testing to analyse effectiveness
- Regular follow up with our clients to ensure smooth functioning of their systems

Outcome

Varishtha Infotech successfully implemented AECB services for our clients. This has saved our clients lots of time and energy, that their staff were able to refocus on their core functions. They also benefitted from Varishtha's technical expertise for this project.

About Us
